

WIKIPEDIA

# List of mobile telephone prefixes by country

---

The telecommunication administrations in many countries assign specific telephone number prefixes to mobile phones within their telephone numbering plan, however some do not. The North American Numbering Plan Administration (NANPA) in the United States and its territories, Canada, and much of the Caribbean, uses normal geographic area codes for the mobile services so that a mobile telephone number is not easily recognized.

<a href="#">Canada</a>	<a href="#">+1</a>		10		Mobile phones use geographic area codes. Many exchange codes contain primarily mobile devices; local numbers are portable between wired and wireless carriers. While <a href="#">area code 600</a> has been established as a non-geographic code that can be used by mobile phones, the only significant mobile usage has been for <a href="#">satellite phone</a> service in remote regions.

<u>Hungary</u>	<u>+36</u>	20	9	Telenor (formerly Pannon GSM)	After April 1, 2004, the phone numbers can be carried from network to network. That means any of the previous codes can refer to any mobile provider. There's internal roaming between Telenor and Telekom. Mobile numbers are 7 digits long, and look like this: +36 XX 123 4567
		30		Telekom ( <i>former T-Mobile, Westel 900</i> )	
		31		UPC Mobil and several smaller cell phone MVNO-s (hosted by Vodafone) ( <i>former Tesco Mobile which was hosted by Vodafone until 2016.04.16.</i> )	
		50		DIGI.MOBILE HUNGARY 4G ( <i>planned</i> )	It will be the 4th mobile carrier in Hungary. Previously it was going to be the MPVI Mobil but it has never been established. It's plan was withdrawn.
		60		reserved/retired	Former Westel 0660 (which used the 450 MHz NMT standard) until 2003.06.30. It was the first and the only "mobile" provider which used only 6 digits back in the day. Afterwards the customers have been transferred to Westel 900. They could keep their number but all of them got a digit "9" to the top of their number. So they then became standard "7 digit number" users. Their number are now look like this: +36 30 9 XXX XXX
		70		Vodafone

<u>United States (USA)</u>	<u>+1</u>		10		Mobile phones use geographic area codes. However, there are exchange codes used for only mobile devices. Also, some overlay area codes are only used on mobile devices, or special internet phone systems other than most VoIP systems (e.g.: <u>Google Voice</u> , <u>eFax</u> , <u>eVoice</u> ).

## Notes

- Mobile Prefix - The original prefix issued to the mobile network operator. Please note: due to mobile number portability, it is possible for these mobile prefixes to be shared by different mobile operators.
- NSN - National Significant Number: the number of digits that allow to uniquely identify a number within the country. It excludes the country code and any trunk code or access code. It includes the mobile prefix towards the total number of digits.
